

Continuous P(TL>100dB) — All 5 Methods | Full 3-Parameter Uncertainty
Colour = actual shadow probability (0=clear → 1=shadow) | White dashed = 95% boundary

White dashed contour = 95% threshold

Colour shows CONTINUOUS P(shadow)
not just the binary above/below 95%.

Dark blue ($P \approx 0$) = definitely clear.
Yellow ($P \approx 1$) = guaranteed shadow.

Method differences are most visible
in the 0.5–0.9 probability gradient.
